

Simple Invoice Manager (SIM) — RAG-Optimized Knowledge Base (Part II)

This knowledge base is structured for retrieval-augmented generation (RAG). Each section begins with a [Topic] label for accurate chunk retrieval. Tables are converted to bullet points. FAQs are included at the end of each section.

Table of Contents

1. [Online Store](#)
2. [POS Billing](#)
3. [Reports](#)
4. [Other Income](#)
5. [Switch Users](#)
6. [Receivable & Payable](#)

[Topic: Online Store]

1. Online Store

Definition

The Online Store is a built-in digital storefront inside SIM that allows businesses to list their products online and receive customer orders directly within the app. The store generates a shareable link that can be sent to customers or posted on social media. When a customer visits the link and places an order, it is automatically received in the app as a Sale Order — no manual entry required.

This is a Beta feature and must be enabled before use.

When & Who

- Businesses that want a simple online presence without managing a separate e-commerce platform.
- Retailers, small shops, and service providers who share catalogues via WhatsApp, social media, or messaging.

- Any business that wants to automate order collection from walk-in or repeat customers.

Navigation Path

Settings → Enable / Disable Features or Search → Online Store → Enable Store Feature → Enter store name

Store Identity Fields

- **Store Name** — The name displayed to customers on the storefront. Should match the business name or brand.
- **Store Logo** — An uploaded image that appears as the store's brand identity on the customer-facing page.
- **Store Link** — A unique URL automatically generated by the app. Shareable directly with customers or on social platforms.

Product Detail Fields (Online Store)

- **Product Code** — A reference identifier for the product. Helps with internal tracking.
- **Rate** — The selling price displayed to customers on the store.
- **Units** — The measurement unit (e.g., pcs, kg, box).
- **Product Category** — The store category this product belongs to (e.g., Electronics, Clothing).
- **Maximum Order Quantity** — The maximum number of units a single customer can order in one transaction. Useful for managing stock.
- **Offer Price** — A discounted price enabled via a checkbox. When set, both the original rate and offer price are displayed to show the customer the deal.
- **Product Description** — A text description of the product including features, specifications, and usage. Helps customers make informed decisions.
- **Product Image** — A photo of the product. Can be added from the product details form or from the Manage Product Images section in Product Settings.
- **Additional Info** — Free-form field for extra details not covered by standard fields.
- **Product Tag** — A short label displayed as a badge on the product (e.g., "20% OFF", "New Arrival", "Limited Edition"). Requires Show Tag to be enabled in Site Settings.

Store Settings

1. Product Settings

- Manage product details such as name, price, category, description, image, and offers.
- Control product availability and display.
- Set order limits and arrange product sequence.
- Enable or disable adding new products to the store.

2. Online Store Site Settings Controls how the store looks and what customers see.

- **Theme** — Choose the store design and layout.
- **Language** — Set the store's display language.
- **Show / Hide options** — Control visibility of prices, product availability, product tags, and contact details.

- Sale Order Form Fields — Decide what customer information to collect at checkout (name, phone, email, etc.) and add custom fields.

3. Product Category

- Organizes similar products into groups.
- Enable or disable categorization, view existing categories, and add new ones with a name and optional thumbnail.
- Categories can be edited or deleted individually or in bulk.

4. Manage Product Images

- Assign images to each product using the (+) button.
- Existing images can be removed using the delete icon.
- Multiple product images can be managed at once.

5. Banner Settings

- Upload and manage promotional banners displayed at the top of the store as a carousel.
- Up to 5 banner images can be uploaded.
- Each banner can be linked to a specific Product, a Category, or set to None (display only).
- Banners can be removed or reassigned individually or in bulk.

Alternate Terms

- Online Store is also called: Digital Store, Web Store, E-commerce Store, Online Shop, Customer Portal
- Store Link is also called: Shop URL, Store URL, Share Link
- Published is also called: Active, Live, Visible
- Disabled is also called: Hidden, Inactive, Unlisted
- Product Tag is also called: Label, Badge, Offer Tag, Promo Tag
- Sale Order Form is also called: Checkout Form, Order Form, Customer Details Form
- Banner is also called: Promotional Banner, Hero Image, Carousel Image, Slider

FAQs

Q: What is the Online Store feature in SIM? A: The Online Store is a built-in digital storefront that lets businesses list products online and receive customer orders directly in the app as Sale Orders. It generates a shareable store link without needing a separate e-commerce platform.

Q: How to enable the Online Store in SIM? A: Go to Settings → Enable / Disable Features → Online Store → Enable Store Feature → enter your store name.

Q: How to share the online store link with customers? A: After enabling the store, a unique Store Link is automatically generated by the app. Share this link directly with customers via WhatsApp, social media, or messaging.

Q: What is a Product Tag in the Online Store? A: A Product Tag is a short badge displayed on the product listing (e.g., "20% OFF", "New Arrival"). The Show Tag option must be enabled in Site Settings for tags to appear on the store.

Q: What is the difference between Offer Price and Rate in the Online Store? A: Rate is the regular selling price. Offer Price is a discounted price enabled via a checkbox. When set, both prices are shown to the customer to highlight the deal.

Q: How many banners can I upload in the Online Store? A: Up to 5 banner images can be uploaded. They display as a carousel at the top of the store.

Q: What happens when a customer places an order through the Online Store? A: The order is automatically received in the app as a Sale Order under the Online Store Sale Order list. No manual entry is needed.

Q: Can I control what information customers fill at checkout? A: Yes. Go to Site Settings → Sale Order Form Fields to decide what customer information (name, phone, email, etc.) is collected at checkout. Custom fields can also be added.

Q: What is the size limit for banner images? A: Banner images must be under 2 MB in file size. The aspect ratio defines the shape of the banner. Supported ratios include 5:2, 16:7, 7:2, etc.

Q: Can I change the logo of my store later? A: Yes, you can update or change your store logo at any time from the store settings. The updated logo will be reflected on your storefront.

2. POS Billing

Definition

POS (Point of Sale) Billing is a fast checkout mode in SIM designed for retail shops where speed is critical. It changes the app screen into a billing counter optimized for quickly adding items, collecting payments, and generating receipts. It supports hardware like barcode scanners and thermal printers, and also works with the phone's built-in camera for scanning.

When & Who

- Retail shops, supermarkets, pharmacies, restaurants, and any business with a physical billing counter.
- Ideal for businesses with high sales volume that need fast checkout.

Navigation Path

Dashboard → Side Menu (☰) → Enable / Switch to POS → Create Invoice page → Select products → Save and Next → Select customer and payment type → Save and Exit

Product Addition Methods

Three ways to add products to the cart during a POS transaction:

- **Search by Name** — Type the product name to find and add it.
- **Tap Product Icon** — Tap the product tile directly from the visual product grid.
- **Barcode Scan** — Scan the product's barcode using a paired scanner or the device camera.

The cart total updates in real-time as items are added.

Key Fields During Checkout

- **Quantity Adjustment** — Increase or decrease item quantities using + and – buttons on the cart screen.
- **Discount** — A discount can be applied to the total before finalizing the bill.
- **Customer Type** — Identifies the type of customer. Options: Walk-in (anonymous), POS, or Regular (linked to a client record).
- **Payment Method** — The mode of payment accepted — Cash, UPI, Credit Card, or other configured methods.

Transaction Completion Options

- **Save & Next** — Saves the transaction and immediately opens a new blank billing screen for the next customer. No receipt printed.
- **Save & Exit** — Saves the transaction and returns to the main screen. No receipt printed.
- **Print & Exit** — Saves the transaction and triggers the print popup to send a receipt to the connected thermal printer.

Optional Hardware

These devices are not required but make billing faster:

- **Thermal Printer** — Instantly prints receipts. Supports 58mm and 80mm sizes. Connects via Bluetooth or cable.
- **Barcode Scanner** — Adds products quickly by scanning barcodes. Connects via Bluetooth or cable. If no physical scanner is available, the device camera can be used.

Navigation to configure hardware: Settings → Hardware & Devices → Printer Settings / Scanner Settings

Key Concepts

- **POS vs. Standard Invoice** — Both create a sales record. POS mode is optimized for speed at a physical counter with product images, barcode scanning, and instant printing. Standard invoicing is for detailed billing, document customization, and client-specific records.
- **Walk-in Customer** — An anonymous customer. No customer details are saved. Used for one-time buyers.
- **Regular Customer** — A customer with full details saved (name, address, phone, GSTIN). Used for repeat or wholesale customers.

Alternate Terms

- POS Billing is also called: Point of Sale, Retail Billing, Counter Billing, Cashier Mode
- Walk-in Customer is also called: Anonymous Customer, Counter Customer, Cash Customer
- Thermal Printer is also called: Receipt Printer, Bill Printer, POS Printer
- Barcode Scanner is also called: Bar Code Reader, Product Scanner
- Save & Next is also called: New Bill, Next Customer
- Cart is also called: Basket, Order, Bill Items

FAQs

Q: What is POS Billing in SIM? A: POS Billing is a fast checkout mode in SIM for shops with physical billing counters. It optimizes the interface for speed — adding items by scanning or tapping, collecting payment, and printing receipts.

Q: How to enable POS mode in SIM? A: Go to the Side Menu → Switch to POS Mode → Enable → OK.

Q: What is a Walk-in Customer in POS mode? A: A Walk-in Customer is an anonymous buyer. No details are saved. Walk-in customers appear in an aggregated form in reports, separate from regular customers.

Q: How to add products in POS billing? A: Products can be added by searching by name, tapping the product tile on the grid, or scanning the barcode using a paired scanner or the device camera.

Q: Does POS billing support a thermal printer? A: Yes. Thermal printers (58mm or 80mm) can be connected via Bluetooth or cable. Configure from Settings → Hardware & Devices → Printer Settings.

Q: What is the difference between Save & Next and Save & Exit in POS? A: Save & Next saves the current transaction and opens a new blank screen for the next customer. Save & Exit saves the transaction and returns to the main screen. Print & Exit saves the transaction and triggers receipt printing.

Q: Can I use POS billing without a barcode scanner? A: Yes. If no physical scanner is available, the device's built-in camera can be used to scan barcodes.

[Topic: Reports]

3. Reports

Definition

The Reports section converts all raw transaction data — invoices, purchases, payments, expenses — into structured financial summaries and insights. It covers sales performance, purchase tracking, pending dues, tax summaries, inventory valuation, profit & loss, and more.

When & Who

- Daily — to check sales figures and payment collections.
- Weekly / Monthly — to track business performance trends.
- During tax filing — to calculate GST, VAT, or other applicable taxes.
- Business owners and freelancers — for overall financial visibility.
- Accountants and finance teams — for reconciliation and tax computation.
- Sales managers — for revenue tracking and client performance.

Navigation Path

Dashboard → Side Menu (≡) → Reports → Select any report from the list

Report Categories & Full Report List

Sales Reports

- **Transaction History / Ledger** — Complete transaction-wise ledger for each client. Shows invoices raised, payments received, and outstanding balance.
- **Sales / Payment Report** — Summary of total sales and payments received within a selected period.
- **Product Report** — Sales performance broken down by product. Shows quantity sold and revenue generated.
- **Sales by Clients — Top 5** — The five highest-value clients by sales amount in the selected period.
- **Sales by Products — Top 5** — The five best-selling products by revenue in the selected period.
- **History of Sales / Payment** — A chronological record of all sales transactions and associated payments.

- **Invoice Aging** — Groups unpaid invoices by how long they have been outstanding (e.g., 0–30 days, 31–60 days, 60+ days). Helps identify overdue collections.
- **Detailed Sales Report** — Line-item level breakdown of all sales showing client, product, quantity, rate, tax, and total for each invoice.
- **Sales Order Report** — Status and value summary of all sale orders — pending and completed.
- **Sales Return Report** — Record of all returned goods showing linked invoices, return quantities, and refund or credit note status.

Purchase Reports

- **Purchase / Payment Report** — Summary of total purchases and payments made to suppliers within a selected period.
- **Detailed Purchase Report** — Line-item level breakdown of all purchases showing supplier, product, quantity, rate, tax, and total.
- **Purchase Order Report** — Status and value summary of all purchase orders — pending and completed.

Inventory Reports

- **Check Inventory Status** — Current stock quantity for all inventory-enabled products. Highlights items below the minimum alert level.
- **Inventory Valuation (FIFO)** — Total monetary value of current stock calculated using the First In, First Out method.
- **Inventory Valuation (Average)** — Total monetary value of current stock using the weighted average cost method.
 - Year Wise – COGS Average Method: Shows inventory cost, COGS, and remaining stock for a full financial year.
 - Product Wise – COGS Method: Shows stock quantity, average cost, and value for each individual product.

Profit & Loss Reports

If you want to check P&L report related to: Opening closing stock, monthly/weekly, Daily the P&L, Product, Invoice and Client you can check the following report:

- **P&L Using COGS** — Profit and loss calculated using Cost of Goods Sold. Formula: Revenue – COGS.
- **P&L Using Opening / Closing Stock** — Profit and loss factoring in stock value at the start and end of a period. Formula: Gross Profit = Sales – (Opening Stock + Purchases – Closing Stock).
- **Monthly / Weekly / Daily P&L — COGS** — P&L broken down by time period using the COGS method.
- **Monthly / Weekly / Daily P&L — Changes in Stock** — P&L broken down by time period using the stock change method.
- **Product-wise Profit / Loss** — Profitability for each individual product showing revenue, cost, and margin.
- **Invoice-wise Profit / Loss** — Profitability shown per invoice. Identifies high-margin and low-margin transactions.
- **Customer-wise Profit / Loss** — Profitability broken down by client. Identifies which clients generate the most profit.

Tax Reports

- **Sales / Purchase Tax Report** — Total tax collected on sales and tax paid on purchases within a period. Breakdown by tax type (SGST, CGST, IGST, etc.). Used for GST / VAT filing.

Other Reports

- **Expense Report** — Summary of all business expenses recorded in the app by category and period.
- **Commission Report** — Agent-wise commission earned based on invoices they are assigned to.
- **Payment Account Report** — Summary of payments categorized by payment account or mode (e.g., cash, bank, UPI).
- **Cash / Bank Report** — This report shows the records all transactions and payments involving Cash/bank and other

Key Concepts

- **COGS (Cost of Goods Sold)** — The direct cost incurred to purchase or produce goods sold in a period. P&L using $COGS = Revenue - COGS$. It does not account for remaining unsold stock.
- **P&L Using Opening / Closing Stock** — Calculates gross profit as: $Sales - (Opening\ Stock + Purchases - Closing\ Stock)$. Accounts for the change in inventory value over the period. Commonly used in trading businesses.
- **Inventory Valuation** — The monetary value assigned to unsold stock at a point in time. Differs depending on the method used (Weighted Average or FIFO) and directly impacts reported profit and balance sheet figures.
- **Invoice Aging** — Classifies unpaid invoices by how long they have been outstanding. A standard tool for prioritizing overdue collections.

Alternate Terms

- Reports is also called: Analytics, Insights, Financial Summary, Business Reports, MIS Reports
- Transaction History / Ledger is also called: Client Ledger, Account Statement, Party Statement
- Invoice Aging is also called: Aging Report, Overdue Report, Receivables Aging
- P&L is also called: Profit & Loss Statement, Income Statement, P&L Account
- COGS is also called: Cost of Goods Sold, Cost of Sales, Direct Cost
- Inventory Valuation is also called: Stock Valuation, Closing Stock Value
- Sales / Purchase Tax Report is also called: GST Report, VAT Report, Tax Summary
- Expense Report is also called: Expenditure Report, Cost Report
- Commission Report is also called: Agent Report, Salesperson Commission
- Payment Account Report is also called: Payment Mode Report, Collection Report

FAQs

Q: Where are reports in SIM? A: From the dashboard, Side Menu (☰). Tap on any report category to see the full list.

Q: How to get a client ledger or statement? A: Go to Reports → Sales → Transaction History / Ledger → tap on a specific client. This shows all invoices, payments, credit notes, and returns along with the outstanding balance.

Q: What is Invoice Aging? A: Invoice Aging groups unpaid invoices by how long they have been outstanding (e.g., 0–30 days, 31–60 days, 60+ days). It helps identify overdue collections and prioritize follow-ups.

Q: What is the difference between P&L Using COGS and P&L Using Opening / Closing Stock? A: P&L Using COGS calculates profit as Revenue minus the direct cost of goods sold. P&L Using Opening/Closing Stock calculates gross profit as: Sales – (Opening Stock + Purchases – Closing Stock). The second method accounts for the change in inventory value.

Q: How to generate a GST tax report in SIM? A: Go to Reports → Tax → Sales / Purchase Tax Report. This shows total tax collected and paid, broken down by SGST, CGST, IGST, and other tax types for a selected period.

Q: How to check the commission report? A: Go to Reports → Other → Commission Report. This shows agent-wise commission earned based on invoices they are assigned to.

Q: What is the Inventory Valuation report? A: The Inventory Valuation report shows the total monetary value of current unsold stock. It is available in two methods: Weighted Average and FIFO.

[Topic: Other Income]

4. Other Income

Definition

Other Income is a feature to record money earned outside of regular sales invoices. It captures income that has no linked client, product, or invoice — ensuring all business earnings are reflected in financial reports and P&L.

Examples of Other Income:

- Interest income earned on bank deposits
- Rental income from property or equipment leasing
- Discounts received from vendors
- Miscellaneous or one-time earnings

This feature must be enabled before use. It is disabled by default.

When & Who

- When income is received without generating a client invoice.
- For one-time or irregular earnings outside the normal sales cycle.
- During accounting or tax preparation to ensure complete financial records.
- Small business owners, shopkeepers, freelancers, and accountants.

Navigation Path

To enable: Settings → Enable / Disable Features → Other Income → Enable Other Income Feature

To use after enabling: Dashboard → Side Menu (☰) → Other Income → Other Income List → Create Other Income → Enter details → Save

Key Fields

- **Date** — The date on which the income was received.
- **Name / Description** — A label for the entry (e.g., "Bank Interest", "Rental Income", "Vendor Discount").
- **Amount** — The monetary value of the income received.
- **Note** — Optional free-text field for additional context or remarks.
- **Payment Account** — The cash or bank account through which the income was received. Requires the Payment Account feature to be enabled separately from Settings.

Optional Sub-Feature

Payment Account — To record which cash or bank account the income was received into, the Payment Account feature must be enabled from Settings → Enable / Disable Features. Once enabled, a Payment Account field appears on the Other Income entry form.

Key Concepts

- **Other Income vs. Sales Income** — Sales income is generated from invoices raised to clients for products or services. Other income is any earning with no linked client, product, or invoice. Keeping them separate ensures clean financial reporting and accurate P&L.
- **Impact on Reports** — Other income entries are reflected in Profit & Loss reports and the dashboard financial summary. They appear under a separate income category, keeping sales and non-sales income distinguishable.

Alternate Terms

- Other Income is also called: Miscellaneous Income, Additional Income, Non-Sales Income, Indirect Income, Other Receipts, Extra Earnings

FAQs

Q: What is Other Income in SIM? A: Other Income is used to record earnings not linked to any invoice, client, or product — such as interest income, rental income, vendor discounts, or miscellaneous receipts. It ensures all business earnings appear in financial reports.

Q: How to enable Other Income in SIM? A: Go to Settings → Enable / Disable Features → Other Income → Enable Other Income Feature.

Q: How to add an Other Income entry? A: After enabling, go to Dashboard → Side Menu (☰) → Other Income → tap Create Other Income (+) → enter date, name, amount, and note → Save.

Q: Does Other Income appear in P&L reports? A: Yes. Other income entries are reflected in Profit & Loss reports and the overall dashboard financial summary. They appear under a separate income category, distinct from sales income.

Q: What is the difference between Other Income and Sales Income? A: Sales income comes from invoices raised to clients for products or services delivered. Other income is any earning with no linked client, product, or invoice (e.g., bank interest, rent received).

Q: Can I record which bank account Other Income was received into? A: Yes, but the Payment Account feature must be enabled from Settings → Enable / Disable Features first. Once enabled, a Payment Account field appears in the Other Income entry form.

[Topic: Switch Users]

5. Switch Users

Definition

Switch Users allows multiple user accounts to be accessed from the same device without uninstalling the app or resetting data. Each user account maintains completely independent data — invoices, clients, products, reports. New users can be created or existing accounts can be logged in through this feature.

There is no limit on the number of user accounts that can be added.

When & Who

- When multiple people share the same physical device (e.g., a shared billing tablet).
- When one person manages multiple businesses, each with separate books.
- When an accountant handles multiple client accounts on one device.
- Business owners with multiple shops or business entities.
- Accountants managing multiple clients.
- Staff members sharing a single device at a counter.

Navigation Path

Side Menu (☰) → Cloud Account → Switch User → Add User

From the login screen: log in with an existing registered account or register a new one.

Managing Multiple Organizations

- Multiple companies or organizations can be managed using the Switch User feature.
- A separate subscription must be purchased for each additional organization.
- To purchase an additional organization: Side Menu → Upgrade → Purchase Additional Organization
- To switch between organizations: Side Menu → Cloud Account → Switch User

Key Concepts

- **Data Separation** — Each user account in SIM operates as a completely independent instance. Invoices, clients, suppliers, products, and reports of one account are not visible to or shared with another account on the same device. Switching users changes the entire working context of the app.
- **Cloud Account Requirement** — Switch Users works through the Cloud Account system. Each account must be registered and synced with the cloud to be accessible across devices.

Alternate Terms

- Switch Users is also called: Change User, Switch Account, Account Switch, Multi-User Mode, Profile Switching, User Management

FAQs

Q: What is the Switch Users feature in SIM? A: Switch Users allows multiple separate user accounts to be accessed from the same device. Each account has its own independent data — invoices, clients, products, and reports.

Q: How to switch between users in SIM? A: Go to Side Menu → Cloud Account → Switch User. Select the account to switch to or add a new one.

Q: Is there a limit on how many users can be added? A: There is no limit on the number of user accounts that can be added via Switch Users.

Q: Can I manage multiple businesses from one device? A: Yes. Multiple businesses can be managed using Switch Users. Each business needs its own user account and a separate subscription.

Q: How to purchase an additional organization account? A: Go to Side Menu → Upgrade → Purchase Additional Organization.

Q: Is data shared between different user accounts on the same device? A: No. Each user account operates as a completely independent instance. Data from one account is not visible to or shared with another account on the same device.

[Topic: Receivable Payable]

6. Receivable & Payable

Definition

- **Receivable (Accounts Receivable)** — The total amount clients owe the business for invoices issued but not yet paid.
- **Payable (Accounts Payable)** — The total amount the business owes to suppliers for purchases received but not yet paid for.

Both are visible on the dashboard in the Summary Layout. The layout must be switched from the default view to Summary Layout to see these figures.

When & Who

Receivable:

- After invoices are raised but before payment is collected.
- Used by business owners, freelancers, and sales/accounts teams.

Payable:

- After purchase records are created but before payment is made to suppliers.
- Used by business owners, procurement teams, and accountants.

Navigation Path

To view Receivables: Dashboard → Switch to Summary Layout → Receivables section → Balance Receivables

To view Payables: Dashboard → Switch to Summary Layout → Payables section → Balance Payable

How Balances Change

- Receivable balance increases — when an invoice is created and payment has NOT been marked as received.
- Receivable balance decreases — when payment is recorded against an invoice (Mark as Received).
- Payable balance increases — when a purchase record is created and payment has NOT been marked as paid.
- Payable balance decreases — when payment is made to the supplier (Mark as Paid).

Optional Features

Receivable:

- Payment Reminders — Send reminders to clients for overdue invoices.
- Invoice Aging Report — View overdue invoices grouped by time brackets (0–30 days, 30–60 days, 60+ days).
- Partial Payment Tracking — Track how much has been paid and how much remains outstanding per invoice.

Payable:

- Due Date Reminders — Get notified when a supplier payment is due.
- Expense Categorization — Classify payables by expense type.
- Recurring Bills — Track regularly recurring payables like rent and subscriptions.
- Approval Workflow — Route payables through an approval process before payment (linked to Sub User approval feature).

Key Concepts

- **Accounts Receivable (AR)** — Money owed to the business by customers. It is an asset on the balance sheet. High AR with slow collection indicates cash flow risk.
- **Accounts Payable (AP)** — Money the business owes to suppliers. It is a liability on the balance sheet. Managing AP efficiently helps maintain supplier relationships and avoid late payment penalties.

- **AR vs. AP in Cash Flow** — A business is cash-flow healthy when it collects receivables faster than it pays its payables. Monitoring both in SIM gives the owner a clear picture of net cash position.
- **Summary Layout** — A specific dashboard view in SIM that shows a financial summary including Receivable and Payable balances. Must be selected manually — the default layout does not show these figures.

Alternate Terms

- Receivable is also called: Accounts Receivable (AR), Outstanding Invoices, Customer Dues, Money to Collect, Debtors
- Payable is also called: Accounts Payable (AP), Outstanding Purchases, Supplier Dues, Money to Pay, Creditors
- Balance Receivable is also called: Total Outstanding, Unpaid Invoices Total, AR Balance
- Balance Payable is also called: Total Dues, Unpaid Purchases Total, AP Balance
- Mark as Received is also called: Payment Collected, Invoice Paid, Clear Receivable
- Mark as Paid is also called: Payment Made, Supplier Paid, Clear Payable

FAQs

Q: What is Receivable in SIM? A: Receivable (Accounts Receivable) is the total amount clients owe the business for invoices that have been issued but not yet paid.

Q: What is Payable in SIM? A: Payable (Accounts Payable) is the total amount the business owes to suppliers for purchases received but not yet paid for.

Q: How to view Receivable and Payable balances in SIM? A: Switch the dashboard to Summary Layout. Receivables and Payables are visible in their respective sections on this view.

Q: How does the Receivable balance decrease? A: The Receivable balance decreases when a payment is recorded against an invoice using Mark as Received.

Q: How does the Payable balance decrease? A: The Payable balance decreases when payment is made to a supplier using Mark as Paid.

Q: What is the Summary Layout? A: Summary Layout is a specific dashboard view in SIM that shows a financial summary including Receivable and Payable balances. It must be selected manually as the default layout does not show these figures.
