[Topic: Delivery Note]

7. Delivery Note

Definition

A delivery note is a shipping document issued by the seller that physically accompanies goods during transit. It details the items dispatched, quantities, and destination. It is not a request for payment — it is proof of dispatch and proof of delivery.

SIM supports two workflows:

- **Dispatch first, invoice later** — Create a delivery note at the time of dispatch and convert it into an invoice once billing is due.
- **Invoice first, deliver later** — Create the invoice first and generate a delivery note from it at the time of physical dispatch.

This feature must be enabled before use. It is disabled by default.

When & Who

- When goods are dispatched before the invoice is raised (common in credit sales).
- When a partial delivery is made and billing will follow later.
- When goods need to travel before the customer has approved or inspected them.
- In milestone-based or project billing where invoicing happens in stages.

Who uses it:

- Business Owner / Sales Team — Creates and issues the delivery note at the time of dispatch.
- Warehouse / Dispatch Team — Uses it as the dispatch instruction and packing reference.
- Customer — Signs or acknowledges the delivery note as proof of receipt.
- Accounts Team — Converts the pending delivery note into a final invoice for billing.

Navigation Path

To enable: Settings → Enable / Disable Features → Delivery Note → Enable

To create from an existing invoice: Invoice List → Tap on an Invoice → Make Delivery Note

To create as a standalone document: Side Menu → Delivery Note → Create Delivery Note Then to convert to invoice:

Delivery Note List → Tap on a Pending Delivery Note → Make Invoice

Sub-Settings

- **Enable Delivery Note Feature** — Activates delivery note creation and management in the app.
- **Display Rate and Amount** — When enabled, product rates and total amounts are shown on the delivery note. When disabled, only items and quantities appear with no pricing.

Delivery Note Statuses

- **Invoice Pending** — Goods have been delivered but no invoice has been raised yet.
- **Invoiced** — Goods have been delivered and the invoice has been raised.

Key Concepts

- **Delivery Note vs. Invoice** — An invoice is a payment request. A delivery note is a dispatch confirmation. In many businesses, goods travel first and billing happens later, making the delivery note the primary document at the point of dispatch.
- **Delivery Note vs. E-Way Bill** — A delivery note is an internal business document. An E-Way Bill is a government-mandated compliance document required for transporting goods worth more than ₹50,000 within India. Both can be used together for the same shipment.
- **Partial Delivery** — When a customer orders 100 units but only 60 are available, a delivery note is raised for 60 units. The remaining 40 are shipped later with a separate delivery note. The final invoice is raised once all

deliveries are complete, or separate invoices can be raised per delivery.

Alternate Terms

- Delivery Note is also called: Delivery Challan, Goods Dispatch Note, Dispatch Challan, Shipment Note, Delivery Slip, Challan

FAQs

Q: What is a Delivery Note in SIM? A: A delivery note is a shipping document that accompanies goods during transit. It confirms what was dispatched, in what quantity, and to where. It is not a payment request — it is proof of dispatch and delivery.

Q: How to enable the Delivery Note feature in SIM? A: Go to Settings → Enable / Disable Features → Delivery Note → Enable.

Q: How to create a delivery note from an invoice? A: Go to the Invoice List → tap on the invoice → tap Make Delivery Note.

Q: How to create a standalone delivery note and convert it to an invoice later? A: Go to Side Menu → Delivery Note → Create Delivery Note. Later, go to Delivery Note List → tap on a Pending Delivery Note → tap Make Invoice.

Q: What is the difference between a Delivery Note and an E-Way Bill? A: A delivery note is an internal business document confirming dispatch. An E-Way Bill is a government-mandated compliance document required for transporting goods worth more than ₹50,000 in India. Both can be used together.

Q: What does the Display Rate and Amount setting do on a Delivery Note? A: When enabled, product rates and total amounts are shown on the delivery note. When disabled, only item names and quantities appear — no pricing is shown.

Q: What is the Invoice Pending status on a delivery note? A: Invoice Pending means goods have been delivered but no invoice has been raised yet for this delivery note.

[Topic: Commission]

8. Commission

Definition

Commission is a performance-based payment made to an agent, salesperson, or partner for facilitating a sale or transaction. In SIM, commission can be calculated on the selling price or the discounted selling price. It is excluded from the invoice total and treated as a business expense.

This feature must be enabled before use. It is disabled by default.

When & Who

- When a sale is generated through an agent or salesperson.
- When a payment is received and commission becomes payable.
- When tracking partner or reseller payouts.

Who uses it:

- Salespersons / Employees — Earn commission on invoices they are responsible for.
- Agents / Brokers — Receive a fee for deals they bring to the business.
- Resellers / Partners — Earn a payout on sales made through them.
- Business Owner — Tracks total commission expense and agent-wise performance.

Navigation Path

To enable: Settings → Enable / Disable Features → Commission → Enable Commission Feature → Select valuation method

To add an agent: Side Menu → Commission → Add New Agent

To assign commission on an invoice: Create Invoice → Add Agent → Enter commission percentage or flat amount

To view commission report: Dashboard → Reports → Other → Commission Report

Sub-Settings

- **Enable Commission Feature** — Activates agent creation and commission tracking in the app.
- **Commission Valuation Method** — Determines how commission is calculated: on the full selling price of products, or on the discounted selling price.

Key Fields

- **Agent Name** — The person or entity receiving the commission. Created as a named profile in the Commission section.
- **Commission Type** — Whether commission is calculated as a percentage of the invoice value or as a flat fixed amount per invoice.
- **Commission Percentage** — The percentage of the invoice total payable as commission (e.g., 5% of ₹10,000 = ₹500).

- **Flat Commission Amount** — A fixed amount paid regardless of invoice value (e.g., ₹200 per invoice).

Key Concepts

- **Commission as Expense** — Commission paid to agents is an indirect expense. It appears in the Profit & Loss statement as a cost, reducing net profit. SIM tracks this separately so the business can see total commission outgo against revenue earned.
- **Percentage vs. Flat Commission** — Percentage-based commission scales with the sale value (higher sale, higher commission). Flat-amount commission is a fixed predictable amount regardless of deal size — used for fixed-fee services or standard transactions.

Alternate Terms

- Commission is also called: Sales Commission, Agent Commission, Brokerage, Referral Fee, Incentive, Sales Incentive, Partner Payout
- Agent is also called: Salesperson, Broker, Referral Partner, Reseller, Channel Partner
- Commission Report is also called: Agent Report, Incentive Report, Payout Summary

FAQs

Q: What is Commission in SIM? A: Commission is a payment made to an agent or salesperson for facilitating a sale. SIM tracks commission per agent, calculates it on selling or discounted price, and treats it as a business expense.

Q: How to enable Commission in SIM? A: Go to Settings → Enable / Disable Features → Commission → Enable Commission Feature → select the commission valuation method (on selling price or discounted selling price).

Q: How to add a commission agent in SIM? A: First ensure, To enable: Settings → Enable / Disable Features → Commission → Enable Commission Feature → Select valuation method. Go to Side Menu → Commission → Add New Agent → fill in agent details and commission rate → Save. To assign commission on an invoice: Create Invoice → Add Agent → Enter commission percentage or flat amount

Q: How to assign commission to an invoice? A: When creating an invoice, go to the Agent field → select the agent → enter the commission percentage or flat amount.

Q: What is the difference between percentage-based and flat commission? A: Percentage-based commission scales with the sale value — higher sale means higher commission. Flat commission is a fixed amount paid per invoice regardless of the sale value.

Q: Is commission included in the invoice total? A: No. Commission is excluded from the invoice total and treated as a separate business expense.

Q: How to view the commission report? A: Go to Dashboard → Reports → Other → Commission Report. This shows agent-wise commission earned based on assigned invoices.

9. Receipts

Definition

A payment receipt is a document issued by the seller to the buyer confirming that payment has been received. It is legal proof of a completed transaction — recording the amount paid, the payment method, and the date. Unlike an invoice which requests payment, a receipt confirms payment already made.

In SIM, receipts can only be generated from received payments. A receipt cannot be created without a corresponding payment entry.

Once the receipt is created you can:- Edit, Preview, Send, Print, Delete.

When & Who

- When a customer makes a full payment against an invoice.
- When a partial payment is received and needs to be acknowledged.
- When advance payment is collected before an invoice is raised.
- When a single payment covers multiple invoices.

Who uses it:

- Accounts / Admin — Records the payment and generates the receipt.
- Salesperson — Collects payment in the field and issues a receipt.
- Customer — Receives the receipt as proof of payment.

Navigation Path

To generate a receipt: Dashboard → Payments Section → Payments Received → Tap on a Payment → Make Receipt

To view all generated receipts: Side Menu → Receipts

Key Information

- A receipt can only be generated from the Payments Received section. It is tied to an actual recorded payment.
- Receipts are stored and accessible at any time from the Receipts section in the side menu.
- A receipt can be shared with the customer directly from the app via WhatsApp, email, etc.

Key Concepts

- **Invoice vs. Receipt** — An invoice requests payment from the buyer at the time of sale. A receipt confirms payment has been received after payment is collected. They are two separate distinct documents.
- **Advance Payment Receipt** — When a customer pays before an invoice is created (e.g., a booking advance), a receipt can still be generated for that advance payment. The invoice is raised later when goods are delivered or the service is completed.

- **Receipt for Partial Payment** — If a customer pays ₹3,000 against an invoice of ₹5,000, a receipt is generated for the ₹3,000 received. The invoice remains partially unpaid. A second receipt can be generated when the remaining ₹2,000 is collected.

Alternate Terms

- Receipt is also called: Payment Receipt, Receipt Voucher, Cash Receipt, Collection Entry, Customer Receipt, Money Received Entry
- Payments Received is also called: Collections, Incoming Payments, Payment Register
- Make Receipt is also called: Generate Receipt, Issue Receipt, Print Receipt

FAQs

Q: What is a payment receipt in SIM? A: A payment receipt is a document confirming that payment has been received. It records the amount paid, payment method, and date. It is legal proof that a transaction has been completed.

Q: How to generate a receipt in SIM? A: Go to Dashboard → Payments Section → Payments Received → tap on a payment → tap Make Receipt.

Q: Where can I find all generated receipts? A: Go to Side Menu → Receipts. All generated receipts are stored and accessible here.

Q: What is the difference between an invoice and a receipt? A: An invoice requests payment from the buyer at the time of sale. A receipt confirms that payment has already been received. They are two separate documents used at different stages of a transaction.

Q: Can I generate a receipt for an advance payment? A: Yes. A receipt can be generated for advance payment even before an invoice is created. The invoice is raised later when goods are delivered or service is completed.

Q: Can I generate a receipt for a partial payment? A: Yes. A receipt is generated for the amount actually received. If the invoice is partially paid, the invoice remains partially unpaid and a second receipt can be generated when the remaining balance is collected.

Q: Can I share a receipt with the customer from the app? A: Yes. Receipts can be shared directly from the app via WhatsApp, email, or other sharing options.

Q: Could I get the receipt without payment? A: No, a receipt is generated only when a customer makes a full or partial payment. It serves as proof of payment.

Q: Can I edit or preview receipts? A: Yes, you can edit or preview receipts, but only after a payment has been created. Once a payment is recorded, the receipt becomes available for preview and editing.

[Topic: Batch Upload]

10. Batch Upload

Definition

Batch Upload (also called Bulk Upload) is a feature that allows importing multiple records — products, clients, or suppliers — into SIM all at once using an Excel or CSV file. It also supports updating existing records in bulk, such as updating prices for a large product list or refreshing client details.

Navigation: Settings → Batch Upload

When & Who

- During initial app setup to migrate an existing product catalogue or client list.
- When migrating data from another billing system or spreadsheet.
- When adding a large number of new records (typically 100+ items) at once.
- When updating prices, rates, or details across many existing products or clients.

Who uses it:

- Business Owner — Initial data setup, periodic price updates.
- Accountant — Migrating financial records from a previous system.
- Data Entry Operator — Handling large-volume data imports.

Workflow A: Creating New Records in Bulk

Used when adding products or clients that do not yet exist in SIM.

1. Go to Settings → Batch Upload → Create New Clients / Products
2. Download the template file (Excel format with required column headers)
3. The template can be sent to email or saved directly on the device
4. Fill in the data in the Excel file following the column headers exactly
5. Return to Settings → Batch Upload → Create New Clients / Products → Upload & Create
6. Select the filled file → Upload

Workflow B: Updating Existing Records in Bulk

Used when modifying details of products or clients already in SIM.

1. Go to Settings → Batch Upload → Update Existing Clients / Products
2. Download the existing data file — this exports current records from the app into an Excel sheet
3. Edit the required fields in the downloaded file
4. Return to Settings → Batch Upload → Update Existing Clients / Products → Upload Existing
5. Select the edited file → Upload

Template Column Reference

Common columns in the download template:

- Product Name / Client Name — Record name as it appears in the app
- Sale Rate — Selling price of the product
- Purchase Rate — Cost price / buy rate
- Tax Rate — GST or VAT percentage
- Opening Stock — Initial stock quantity (products only)
- Measurement Unit — Unit of quantity (pcs, kg, etc.)
- HSN Code — Product classification code for GST
- Email / Contact / Address — Client or supplier contact details

The column headers in the template must not be modified. Data must be entered under the exact headers provided.

Key Concepts

- **Template-Based Import** — SIM uses a fixed template with predefined column headers to ensure data is imported correctly. Each column header maps to a specific field in the app. Modifying headers or using a different format will cause the import to fail or produce incorrect data.
- **Create New vs. Update Existing** — Create New adds records that do not yet exist in SIM. Update Existing modifies records already present. Do not use Create New to update existing records — it will create duplicate entries.

Dependencies and Side Effects

What must exist before a batch upload works:

- The Products module must be set up before product uploads.
- The Clients module must be set up before client uploads.
- Any measurement units or product categories used in the file must already exist in the app.

What changes after a successful upload:

- Inventory — Opening stock quantities are applied immediately.
- Reports — New products and clients become part of sales, stock, and valuation reports.
- Invoice Creation — Newly uploaded products and clients are immediately available for selection in invoices.
- App Performance — Very large uploads (1000+ records) may temporarily slow down the app while processing.

Alternate Terms

- Batch Upload is also called: Bulk Upload, Data Import, Mass Upload, Bulk Import, CSV Import, Excel Import
- Template File is also called: Import Template, Upload Format, Data Sheet
- Create New is also called: Add in Bulk, New Import, Fresh Upload
- Update Existing is also called: Bulk Edit, Mass Update, Data Refresh

FAQs

Q: What is Batch Upload in SIM? A: Batch Upload is a feature that allows importing multiple products, clients, or suppliers at once using an Excel or CSV file, instead of adding them one by one.

Q: How to upload multiple products at once using Excel? A: Go to Settings → Batch Upload → Create New Clients / Products → download the template → fill in product details following the column headers → upload the file → confirm.

Q: How to update existing products in bulk? A: Go to Settings → Batch Upload → Update Existing Clients / Products → download the existing data file → edit the required fields → upload the edited file.

Q: Can I modify the column headers in the template file? A: No. The column headers must not be modified. Data must be entered exactly under the provided headers. Changing headers will cause the import to fail.

Q: What happens if I use Create New to update an existing product? A: Using Create New on a record that already exists in SIM may create a duplicate entry. Use Update Existing for modifying existing records.

Q: What happens to inventory after a batch upload? A: Opening stock quantities entered in the upload file are applied immediately to product inventory once the upload is completed.

Q: Can I upload clients and suppliers using Batch Upload? A: Yes. Batch Upload supports uploading products, clients, and suppliers. Select the appropriate option (Clients / Suppliers) from the Batch Upload section.

[Topic: Payment Management]

11. Payment Management

Definition

Payment is a transaction used to record money against an existing invoice or purchase record. It reduces pending amounts or dues. A payment does not create a new transaction — it settles an existing one.

Two primary types of payments:

- **Payment Received** — Occurs when a customer pays for a sales invoice.
- **Payment Paid** — Occurs when the business pays a supplier for a purchase record.

When & Who

- After creating an invoice and receiving payment from a customer.
- When clearing outstanding supplier purchase records.
- When partial or full payment is made against an invoice or purchase record.

Who is involved:

- Customers — Involved in Payment Received scenarios.
- Suppliers / Vendors — Involved in Payment Paid scenarios.

Note: Payment Mode Setting must be enabled to create payments via cash or bank accounts.

Navigation Paths

Flow 1 — Direct Marking

1. Invoice / Purchase List → tap on the record
2. Open action menu → tap Mark as Received (for sales) or Mark as Paid (for purchases)
3. Select cash/bank account, date, and amount → Save

Flow 2 — Via Edit Option

1. Invoice / Purchase List → tap on the record
2. Open action menu → tap Edit
3. Scroll down to the Payment section → expand it → tap Full Paid Now button
4. Update the record

Flow 3 — From Dashboard

1. Dashboard → Side Menu (≡) → Payment section → Add New
2. Select customer (for sales) or supplier (for purchases)
3. Choose Payment against invoice or purchase
4. Check the checkbox for the relevant invoice or purchase record
5. Tap Next → Done

Optional Payment Features

1. Advance Payment

- Advance payments can be created for clients or suppliers from the payment section.
- They can be adjusted against invoices later.
- Advance payments are only adjustable against invoices — they cannot be refunded.
- Advance payments appear in the Payment list only and are not shown on Sale/Purchase Invoices.

To create an advance payment: Payment → Add Payment → select Client / Supplier → select Lumpsum Amount → enter amount → Next

2. Write Off (Sales Invoices Only)

- The Write Off option is available exclusively for sales invoices to account for unrecoverable amounts.

Steps: Invoice List → tap on the invoice → action menu → Mark as Received → remove the amount from the amount field → check Write Off checkbox → Add

3. Opening Balance Adjustment

- Allows adjustment of opening balances against invoices or purchase records.

Steps: Invoice / Purchase List → tap on the record → action menu → Manage Advance to this Invoice (for sales) or Manage Advance to this Purchase (for purchases) → Opening balance adjustment screen appears → check the invoice/purchase checkbox → Done

4. Partial Payments

- Allows payments to be made in installments against an invoice or purchase record.

5. Payment Allocation

- Enables a single payment to be allocated across multiple invoices or purchase records.

Dependent Modules

Payment functionality is integrated with:

- Sale Return and Purchase Return Refund — For processing refunds for returns.
- Other Income Payment — For handling payments for miscellaneous income.

Alternate Terms

- Payment Received is also called: Receive Payment, Invoice Settlement, Collections, Accounts Receivable Entry
- Payment Paid is also called: Make Payment, Bill Payment, Disbursement, Accounts Payable Entry

FAQs

Q: What is Payment in SIM? A: Payment is a transaction that records money received from a customer or paid to a supplier against an existing invoice or purchase record. It reduces the pending amount without creating a new transaction.

Q: How to record a payment received from a customer? A: Go to the Invoice List → tap on the invoice → action menu → Mark as Received → select account, date, and amount → Save.

Q: How to record a payment made to a supplier? A: Go to the Purchase List → tap on the purchase record → action menu → Mark as Paid → select account, date, and amount → Save.

Q: How to record payment directly from the dashboard? A: Dashboard → Side Menu (≡) → Payment section → Add New → select customer or supplier → choose Payment against invoice or purchase → check the relevant invoice → Next → Done.

Q: What is an Advance Payment in SIM? A: An advance payment is a payment created before an invoice is raised. It is stored in the Payment list and can be adjusted against a future invoice. Advance payments cannot be refunded.

Q: What is Write Off in SIM? A: Write Off is an option available for sales invoices to account for amounts that cannot be recovered. It is applied by removing the amount from the payment field and checking the Write Off checkbox when marking an invoice as received.

Q: What is Payment Allocation? A: Payment Allocation enables a single payment to be distributed across multiple invoices or purchase records.

Q: What is Opening Balance Adjustment? A: Opening Balance Adjustment allows the outstanding opening balance of a client or supplier to be applied against an invoice or purchase record to reduce the pending amount.

12. Cash / Bank Fund Transfer

Definition

Cash / Bank Fund Transfer is a feature to record movement of money between payment accounts — either transferring funds between cash and bank accounts, or recording standalone manual transactions (income, expenses, adjustments) against a single account.

Prerequisite: Payment Account feature must be enabled before this feature is available.

When & Who

- When moving funds between cash and bank accounts.
- When recording cash inflows or outflows not linked to an invoice or purchase.
- Used by accountants, finance teams, and business owners.

Navigation Path

Settings → Enable Payment Account Settings → Side Menu → Payments → New Cash/Bank Transfer or New Manual Transfer → Enter details (account, amount, date, notes) → Save

Transaction Types

- **Cash / Bank Transfer** — Records the movement of funds from one account (e.g., Cash) to another (e.g., Bank). Both account balances are updated automatically.
- **Manual Transfer** — Records a standalone transaction against a single account — for example, a cash expense, a deposit, or a balance adjustment. Does not involve a second account.

Interaction with Other Features

- Cash / Bank Report — Shows all fund transfer and manual transactions with edit and delete options.
- Payment Section — Displays all recorded transactions with edit and delete support.

Alternate Terms

- Cash / Bank Fund Transfer is also called: Fund Transfer, Account Transfer, Internal Transfer, Balance Transfer, Cash Flow Transfer, Money Movement

FAQs

Q: What is Cash / Bank Fund Transfer in SIM? A: It is a feature to record movement of money between payment accounts. It supports transfers between cash and bank accounts, and also standalone manual transactions like expenses or deposits.

Q: What is the difference between Cash/Bank Transfer and Manual Transfer? A: Cash/Bank Transfer records movement between two accounts (e.g., from Cash to Bank). Manual Transfer records a standalone transaction against a single account — such as an expense, deposit, or adjustment — without involving a second account.

Q: What must be enabled before using Cash/Bank Fund Transfer? A: The Payment Account feature must be enabled first. Go to Settings → Enable / Disable Features → Payment Account → Enable.

Q: How to create a Cash/Bank Transfer? A: Go to Side Menu → Payments → New Cash/Bank Transfer → enter account, amount, date, and notes → Save.

Q: Where can I view all fund transfer records? A: All fund transfer and manual transactions are visible in the Cash / Bank Report and in the Payments section, both of which support editing and deletion.

[Topic: Thorough Syncing]

13. Thorough Syncing

Definition

Thorough Syncing is an enhanced synchronization mechanism that ensures complete, accurate, and conflict-aware data consistency between local device storage and cloud storage. It goes beyond basic synchronization by performing a comprehensive data alignment.

Thorough Syncing differs from basic sync in the following ways:

- Syncs all modules — including invoices, clients, payments, settings, and reports. No data category is skipped.
- Performs deep comparison — conducts an in-depth analysis of data rather than simply overwriting with the latest version.
- Handles conflicts intelligently — identifies and resolves data conflicts to maintain data integrity.
- Guarantees data integrity — prevents data duplication or loss.

When & Who

When it is used:

- First-time login on a new device — to populate the new device with all existing data.
- After reinstalling the app — to restore and synchronize all data post-reinstallation.
- When switching devices — to ensure seamless data transfer and consistency.
- After long offline usage — to reconcile changes made offline with cloud data.
- Before backup or restore operations — to ensure the most current data is used.

Who uses it:

- Business owners and freelancers — to ensure complete data accuracy and reliability.
- Multi-device users — for consistent data access across phones and tablets.
- Teams — to synchronize shared invoice data among team members.
- Accountants — requiring verified, up-to-date records for financial management.

Navigation Path

Side Menu → Maintenance → Thorough Syncing → Start Syncing

Note: This process may take some time depending on the volume of data.

Alternate Terms

- Thorough Syncing is also called: Full Sync, Deep Sync, Complete Sync, Smart Sync, Advanced Sync, Data Reconciliation Sync, Full Backup & Sync, Master Sync, Integrity Sync

FAQs

Q: What is Thorough Syncing in SIM? A: Thorough Syncing is an advanced sync that ensures complete and accurate data consistency between the device and the cloud. It compares all data deeply, handles conflicts, and prevents duplication or data loss.

Q: How is Thorough Syncing different from regular sync? A: Regular sync does a basic data update. Thorough Syncing performs a deep comparison across all modules — invoices, clients, payments, settings, reports — resolves conflicts, and guarantees full data integrity.

Q: How to start Thorough Syncing? A: Go to Side Menu → Maintenance → Thorough Syncing → Start Syncing.

Q: When should I use Thorough Syncing? A: Use Thorough Syncing when logging in on a new device for the first time, after reinstalling the app, when switching devices, after long periods of offline usage, or before performing a backup or restore.

Q: How long does Thorough Syncing take? A: The time depends on the volume of data. It may take some time to complete for large datasets.

Q: Does Thorough Syncing prevent data loss? A: Yes. Thorough Syncing is designed to prevent data duplication and data loss by performing intelligent conflict resolution and a full data alignment between local and cloud storage.
